Claims Email Triage POC: Results and Next Steps

Fabrikam Insurance · Contoso Consulting

October 22, 2026

AI triage met 4 of 5 success criteria and cut handling time from 6 minutes to 41 seconds per email

We recommend an 8-week pilot on the Motor inbox, with a fix for scanned claim forms.

92.5%

of emails routed to the right team, against a 90% target

41 s

to handle an email with a handler checking, down from 6 min 10 s

88.2%

of claimed amounts read correctly, short of the 95% target because of scanned forms

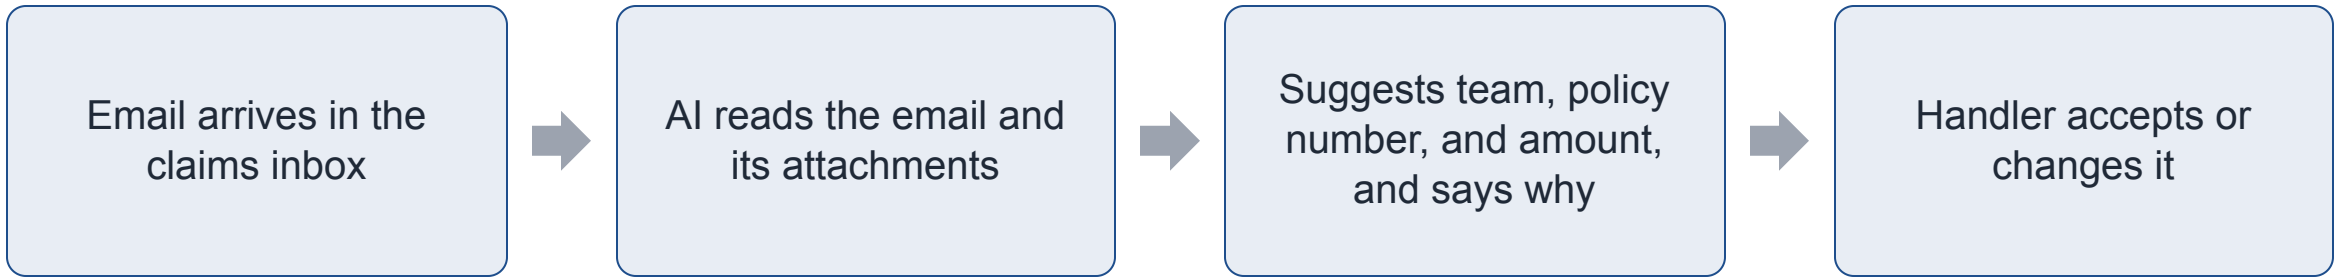

Source: POC test on 600 anonymized emails from January to June 2026. Time study with 3 handlers, 150 emails.

Your intake team spends about 30 hours a day reading and routing claim emails

- **300 claim emails a day,** each read by one of the 4 people on Maria's team
- **6 min 10 s per email** to find the claim type, policy number, and amount, type them in, and forward it
- **Up to 2 days of backlog** in storm weeks, when customers call to ask if their claim arrived
- **The question for the POC:** can AI do the first read well enough that a handler only has to check it?

Source: Fabrikam time study, March 2026.

The AI reads each email and suggests where it goes; a handler checks every suggestion

- **Tested on 600 past emails** from January to June 2026, anonymized by Fabrikam IT: 540 in English, 60 in Spanish
- **Customer data stayed in Fabrikam's Azure tenant.** Azure OpenAI in East US 2, signed off by Raj on September 30, before any emails were loaded
- **Not connected to live email or ClaimsHub** yet. That was out of scope for the POC

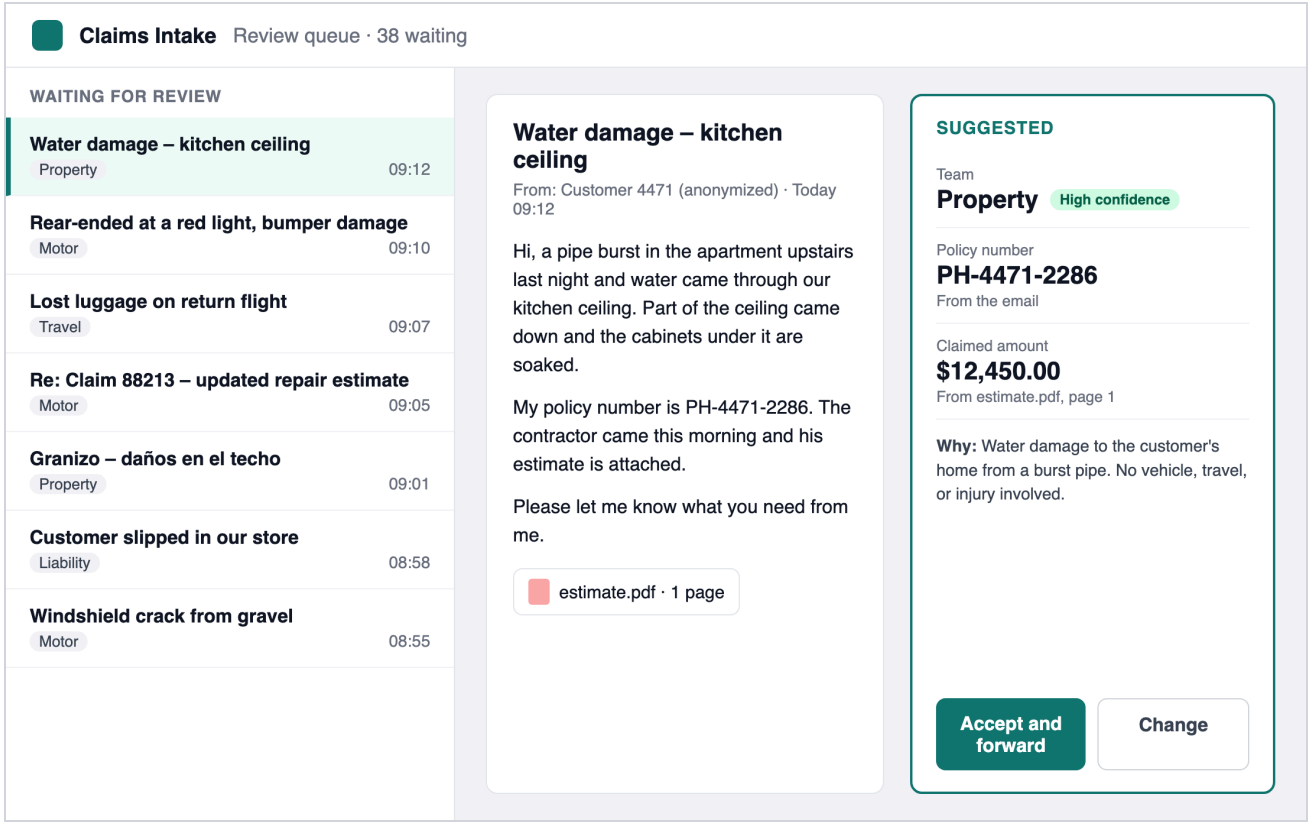

Four of five criteria met; claimed amounts fell short at 88.2%

Criterion	Target	Result	Status
Routed to the right team	≥ 90%	92.5% (555 of 600)	**Met**
Policy number read correctly	≥ 95%	97.8% (587 of 600)	**Met**
Claimed amount read correctly	≥ 95%	88.2% (300 of 340)	**Not met**
Handling time, with a handler checking	< 1 min	41 s on average, from 6 min 10 s	**Met**
Customer data stays in Fabrikam's tenant	Required	Signed off by Raj, September 30	**Met**

Source: POC test on 600 anonymized emails labeled by Fabrikam's intake team. Claimed amount: the 340 emails that state one.

With the suggestion and its reason next to the email, handlers took 41 seconds instead of 6 minutes

- **41 s per email** on average across 150 emails, median 33 s
- **Handlers changed the suggested team on 11 of 150**
- **The "Why" line** is what two handlers said made them trust the suggestions

The review screen from the time study

Two gaps to fix before going live: scanned claim forms and Spanish emails

Scanned claim forms

- 29 of the 40 claimed-amount misses were scanned or handwritten forms
- The other 11 had more than one amount, or a range
- **Fix:** add OCR (Azure AI Document Intelligence) before the AI reads them, then retest

Spanish emails

- 75.0% routed to the right team, against 94.4% for English
- Only 60 Spanish emails in the test set
- **Fix:** label 200 more Spanish emails, then retest

An 8-week pilot on the Motor inbox, then rollout to all claim types

Phase 1: Pilot, 8 weeks

- Motor inbox only, about 43% of claim emails
- Handlers check every suggestion
- Add the OCR and Spanish fixes, then retest
- Done when all five criteria hold on live email for 4 weeks in a row
- **$85,000** fixed fee

Phase 2: Rollout, 10–12 weeks

- All claim types
- Confirmed fields go straight into ClaimsHub, so nobody types them in
- A dashboard for accuracy and volume
- **$140,000–180,000,** firmed up after the pilot

What Fabrikam provides

- **IT:** about 2 days a week from Raj's team, for mailbox access and Azure
- **Claims:** 2 handlers, about 3 hours a week each, for feedback
- **Running cost:** about $900 a year in Azure OpenAI usage at today's volume, plus OCR

We need a go on the pilot by November 13 to start December 1 with the same team

1. **Dana:** approve the 8-week pilot ($85,000) by November 13
2. **Raj:** set up mailbox access through Microsoft Graph before December 1
3. **Maria:** name 2 handlers for the pilot before December 1
4. **Contoso:** start the pilot on December 1

Appendix

Routing held above 90% for every claim type except Liability, at 87.1%

Most Liability misses were injury emails that mention a car, which went to Motor.
